Fruit and Vegetable Division

Fresh Fruit and Vegetable Shipments

By Commodities, States, and Months

PREFACE

This summary publishes domestic rail and piggyback shipments, available truck and air shipments and exports of fresh fruits and vegetables by commodities, modes of transportation, origins and months. Available domestic boat shipments from U.S. possessions and imports from foreign countries are also shown. All amounts are shown in units of 1,000 hundredweight.

Rail and piggyback shipments were reported by rail carriers which issued the initial line-haul revenue waybills. Rail shipments are those moving in refrigerated cars. Piggyback shipments include those moving in trailer-on-flat-car and containeron-flat-car service.

Truck and air shipments for all commodities and origins are not available. Those obtainable are reported but should not be interpreted to represent complete movements. Arizona and Florida truck data represent interstate movement only. Truck shipments reported from all other states are collected at shipping points and include both inter and intrastate movements. California air shipments are reported by originating carriers. Florida and Washington air shipments are collected at shipping points.

Exports of Arizona, California, and Florida citrus and Texas citrus and dry onions are identified. Arizona and California citrus export data were obtained from the Federal marketing order administrative committees. Florida citrus export data were obtained from the Federal-State inspection service. Texas exports were reported by shippers.

Information on domestic boat shipments from U.S. possessions was obtained from boat lines at port cities where market news offices are maintained. Data on imports from foreign countries were obtained from official records of the U.S. Department of Commerce.

A commodity classification table is shown on page 4. Major items are specifically identified, while minor commodities are grouped together and classified under an appropriate commodity heading. A table of net weights for the most commonly used containers for major commodities is shown on page 5. Net weights for other commodities shown in this summary, as well as factors used to convert rail cars and piggyback vans to weight units, are available upon request.

Tables of total reported domestic shipments by commodities, months, and modes of transportation are shown on pages 6, 7 and 8. Tables of domestic shipments by origins, months, and modes of transportation are shown on pages 9 and 10.

The following abbreviations were used to identify California shipments by districts: ND-Northern District; CD-Central District; SD-Southern District; IV-Imperial Valley.

Cooperation of railroad, air, and steamship agents, members of the produce industry, and officials of State Departments of Agriculture, farmers' markets, and the Animal and Plant Health Inspection Service of the U.S. Department of Agriculture is gratefully acknowledged.
